

REMAN Program

Increase uptime and efficiency with a premium refurbished portable compressor

Atlas Copco

REMAN Program

It's inevitable. After many years of productive operation, tough working conditions and the number of running hours can cause your reliable Atlas Copco Compressor to experience a gradual reduction in production and fuel-efficiency.

So, meet Atlas Copco's REMAN Program and benefit from the advantages of a refurbished compressor, without any downtime.

How does it work?

Simple. We take your used equipment back and provide you with another **REMAN compressor**. With restored factory conditions and specifications equal to those of your old compressor. This way, you are assured of Atlas Copco's superior productivity, reliability and serviceability. All in return for a small investment. And as production demands change over time. You might need to work with a bigger compressor in the future. Our **REMAN Program** gives you flexibility in your decision-making process.

Production demands change over time. You might need to work with a bigger compressor in the future. Our REMAN Program gives you flexibility in your decision-making process.

Do you prefer to have your compressor refurbished?

The Refurbishment program offers your old compressor a new life with the same productivity and fuel efficiency level of a new machine, with an upgrade equal to the REMAN Program. Whilst your machine is refurbished, we offer you another back up unit from our REMAN stock to deliver increased productivity by minimizing your downtime.

Maximum value for your old compressor

Attractive investment with depreciation

Maximum productivity
Minimum downtime

Restored factory conditions

2-year warranty
